

Press Release / February 2008

Multepos Announces New Microsoft .Net Version

Multepos Computer Systems Limited ("Multepos"), the highly regarded pharmacy point of sale system software company, has announced that it has now released the latest version of its EPOS and Back-Office software, based on the cutting edge Microsoft.NET® framework.

The new system seamlessly integrates with the latest operating systems, such as Microsoft Vista, as well as being designed to work with all of the most up to date networking, database, communication & internet technologies. Built on over 15 years of pharmacy systems expertise and user-consultation, the new .NET solutions, **multepos | EPOS Lite** and **multepos | EPOS Professional** are the definitive EPoS entry level and complete stock management systems respectively.

The solutions are designed to be the future of pharmacy, encompassing the full spectrum of pharmacy business solutions from single "stand-alone" tills to multi-till networks and in-development dispensary integration. The new solutions offer a host of features tailored to the sector, such as:

- Full PIP code support
- Order transmissions to all major pharmaceutical wholesalers
- Chemist and Druggist price list with weekly updates
- Prescription charges & refunds
- Private scripts
- Sale of OTC dispensary items and OTC stock transfers to dispensary.

The unique MultEPoS Menu Bar allows direct selection of EPoS functions regardless of the other tasks users are performing on their computer.

MultEPoS .NET version incorporates the latest advances in retail technology, for example:

- Touch screen
- Portable terminal data entry
- On-screen interactive help
- Cheque printing / validating
- Back office sales monitoring
